

#EnergyWings came to our museum!

*The storks made a nest
on the pole in the
"Time machine" museum!*

What do DTEK energy workers usually do to protect the birds from electrocution, and customers from power outages due to slippage of the nest on electrical wires?

If you know the answer to this question, come to our museum and get a gift from DTEK Dnipro Grids for the answer to this and other questions.

Besides, you will find out how energy workers transformed their stork protection initiative into an environmental and educational project #EnergyWings that united actions of business, future generation of Ukrainians and modern art.

We look forward to your visit!
