

Photographs of my hanging vegetable garden at home

This year I have tried to make my own hanging vegetable garden at home and learn as much about salad vegetables and the way they are treated. I lack the hanger.

My salad garden

Intersting idea for a vegertable hanger that can be used in larger areas

This structure gave me a good idea for the holder of larger hanging vegetable gardens where there is more space, but the nanylon could be put only on the top instead all over the construction so that the vessels could be hung on the sides and fronts. With transparent nylon it can even serve as a semi plastic garden and maybe the vegetables would grow even better and faster. Also a larger number of people can sit here, but the construction is too large for urban areas so I stick to my own vertical hanging salad garden design. Still I wanted to share this wonderful idea which is not mine. It is located at the outskirts of Kraljevo and is not used for gardening.
